

Instructions for use of Avery Adhesive Remover

issued: 06/08/2007

Attention!

Always follow with the recommended safety instructions. Do not breathe the vapour. Avoid contact with the skin. Wear suitable gloves. Use only in well-ventilated areas. Use adequate respiratory equipment in case of insufficient ventilation.

First test Avery Adhesive Remover on an inconspicuous part of the surface to be treated. Avery Adhesive Remover can damage film or affect the image of any visuals still present.

1. Generously spray Avery Adhesive Remover onto the surface to be treated.
2. Allow the fluid to act on the glue for a couple of minutes. The time required depends on the glue type.
3. In the meantime, regularly moisten the glue by spraying on the remover. Remove the surplus fluid with a cloth.

4. Use a squeegee to remove the glue from the surface. Be careful to avoid scratching. This procedure can be repeated if necessary.

5. Treat the surface with Avery Surface Cleaner prior to any new application of self adhesive film.
